Study Methodology

The goal of this analysis was to investigate the costs associated with remote and hybrid work models. Extant literature was reviewed for relevant content. Findings were presented in the linked literature review article with references presented in this document.

The literature review was conducted by searching out both scholarly and popular sources on costs associated with switching to or continuing remote and hybrid work models. Research topics were sought out regarding costs of cybersecurity, cyberattacks, home office supplies and equipment, what positions can easily be made remote, assessment of remote workers, and other cost related issues.

This study is highly relevant, as businesses, governments, and individuals worldwide are seeking to maximize effectiveness of remote and hybrid workers while keeping costs at a minimum.

Working from Home Increase Cyberattack Frequency by 238%
