

## **TWTG - PRESS RELEASE**

# **TWTG's SolidRed Software Suite awarded for delivering Innovative Technology to the Industry**

SolidRed is awarded for revolutionising the industry, following in the footsteps of the “Innovative Technology” award won by the NEON product line at a previous Tank Storage Award.

**Rotterdam, March 16th 2023.** Last night, at the Schiecentrale in Rotterdam, TWTG's SolidRed software suite received an Innovative Technology Tank Storage award for revolutionising the industry. At the annual ceremony of the Tank Storage Awards, hosted by Tank Storage Magazine in conjunction with StocExpo, SolidRed received the 2023 Silver Award. At the earlier 4th edition of the award show, TWTG's product line of NEON Industrial IoT Sensors already won the Innovative Technology award.

The NEON product family consists of LoRaWAN-based sensors that support TWTG's customers in making industrial sites safer and more efficient. They are wireless, battery-powered, retrofittable, and IECEx / ATEX certified. SolidRed is the new Industrial-IoT platform from TWTG, designed to unleash the potential of I-IoT sensors far beyond their basic functionality. SolidRed works with TWTG's NEON sensors and any other LoRaWAN sensors. Whether an entire facility or its individual assets, SolidRed provides profound insight into the workings of a site. It's a solution designed to gather and analyse data from any operational asset equipped with an I-IoT device. SolidRed allows engineers to make informed decisions and then, on-going, develop agile maintenance strategies designed to continually hone effectiveness and efficiency.

Founded in 2017, The Tank Storage Awards are committed to recognising terminal achievement, providing a source of inspiration and connecting the global Tank Storage community through an annual award ceremony. After receiving over 200 entries from across the globe, this year's International Jury had shortlisted over 80 entries. Out of 10

contestants, SolidRed received the Silver Innovative Technology Award for a technology/product or service that is revolutionising the tank terminal industry. The jury was a panel consisting of executives and professionals from the industry.

CEO Nadine Herrwerth received the award at the ceremony on behalf of TWTG. She stated: “It is always a pleasure to be at the Tank Storage Awards and to meet customers and partners in the industry. Receiving awards like these are seen by us as a confirmation of the industry’s trust in TWTG and our products, not only our market-leading sensors, but also our software suite. Intelligently used, data can liberate industries such as the tank terminal industry from dependency on outdated maintenance methodologies. SolidRed helps companies achieve this by helping create data-led decision and maintenance processes.”

#### **About TWTG**

TWTG is I-IoT. TWTG is the market leader in Industrialised (IECEX / ATEX) LoRaWAN® sensors. Launched in 2012, the company has become known for its green NEON LoRaWAN® products that solve industrial use cases. These wireless, battery-powered sensors revolutionise how industrial sites implement their digitalisation strategy. Based in Rotterdam, the Netherlands (HQ) and Houston, US - As specialists in building IECEX / ATEX certified solutions for complex markets such as the oil and gas, petrochemical and utility sectors, TWTG’s devices contribute to greater accountability and environmental responsibility, while making facilities safer and increasingly efficient.
